

# TeleNeuroforma

COMPUTER PLATFORM FOR  
**TELEREHABILITATION**  
WITH BIOFEEDBACK

Provide your patients with  
a home rehabilitation tool

---

Manage their exercise plans online

---

Track their results  
and present improvements

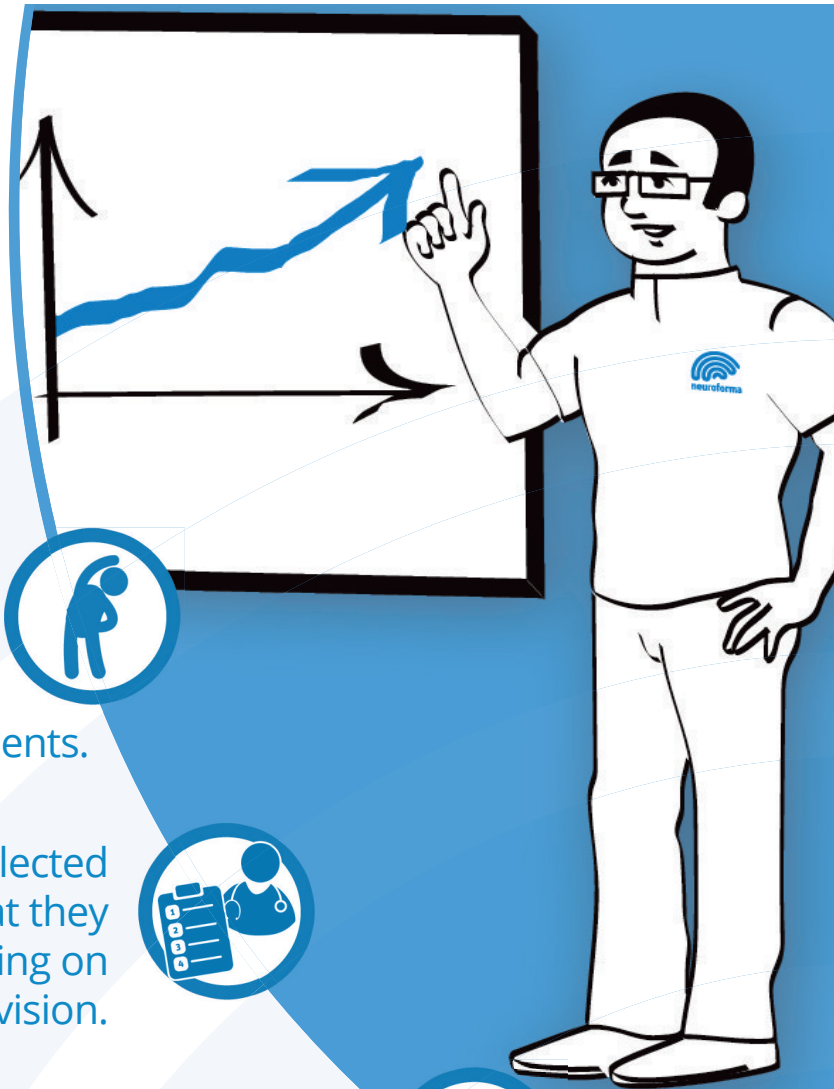

Expand your business with high-tech e-services.

**TeleNeuroforma is an innovative computer platform designed for you to offer complex rehabilitation services in the centre or remotely at home.**

With TeleNeuroforma, you will be able to run attractive and diversified exercises of motor and cognitive functions, using virtual reality and biofeedback components.

In a simple way, you will provide selected patients with home exercises so that they can continue their therapy by working on their own under your remote supervision.

You will use the TeleNeuroforma management panel to easily plan the process including centre-based and home-based exercises. You will create or modify a training session for a selected patient, check their results and the frequency of exercises and provide feedback information.

**If you want to expand your business with complex and high-tech medical e-services allowing patients to continue their therapies, TeleNeuroforma is the solution for you!**
