

# Leertrac

**Data driven Educational Insights**  
**GITO Overijse (Belgium)**  
**Dr. Marc Rabaey**

**10<sup>th</sup> CAF Users' Event under the Polish Presidency of the Council of the EU**

**10<sup>th</sup> April 2025, Warsaw**

# Context

- A secondary school in Flanders, Belgium  
Governed by the local municipal council, focusing on higher education and regional labor market needs.

# Context

- CAF Alignment
  - Employed the Common Assessment Framework (CAF) for structured self-assessment.
  - Aims to strengthen data-driven decision-making within school governance.

# Context

- Key Challenge
  - Underutilized data in Moodle, leading to reliance on end-of-term grades instead of continuous learning insights.
- Learning Process and Learning Gain are very important not points (mind shift)

# Background of the Case

- Initial Observations
  - Final grades dominated deliberations; limited use of learning analytics for early intervention.
  - Existing LMS (Moodle) stored vast student activity data but was rarely accessed systematically.
- Motivation for Leertrac
  - Enhance student support via real-time analytics and reduce isolated, publisher-driven systems.
  - Promote teacher autonomy and open-source educational resources.
- Systems Thinking Approach
  - Integration of Causal Loop Diagrams (CLDs) to visualize feedback loops influencing student motivation, engagement, and performance.

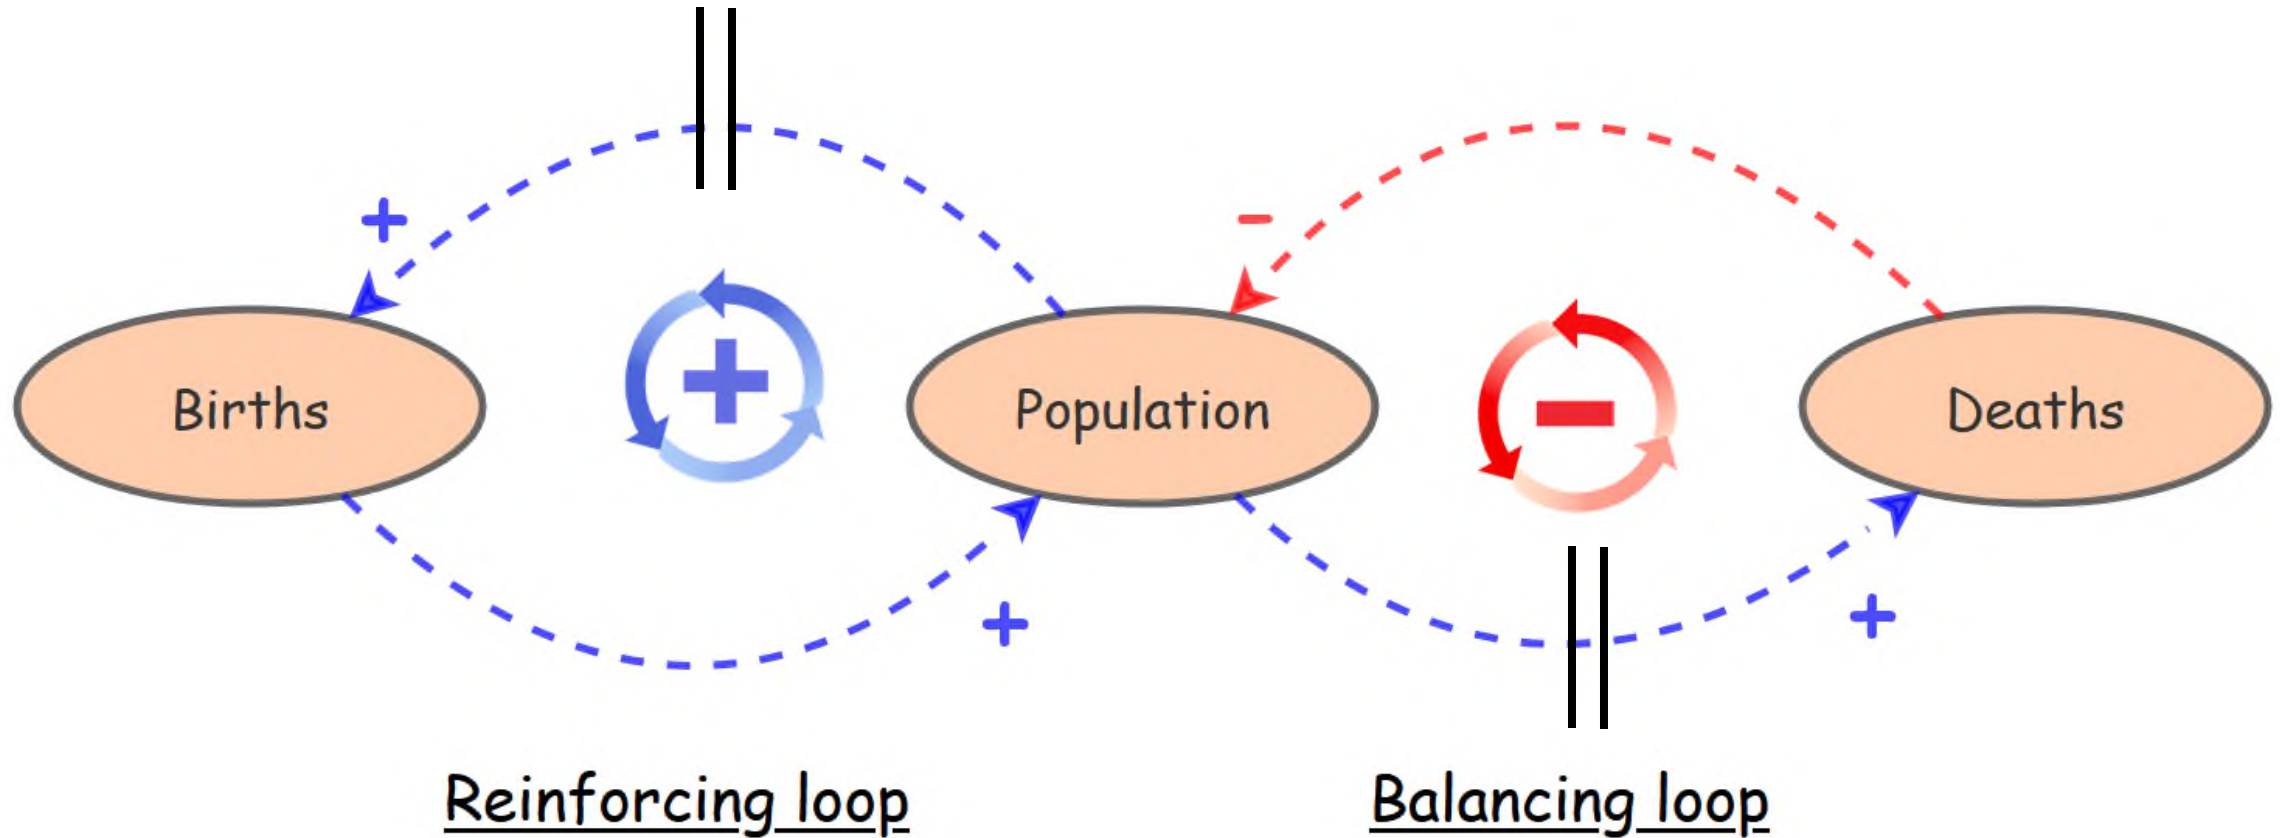

# What is a Causal Loop Diagram?

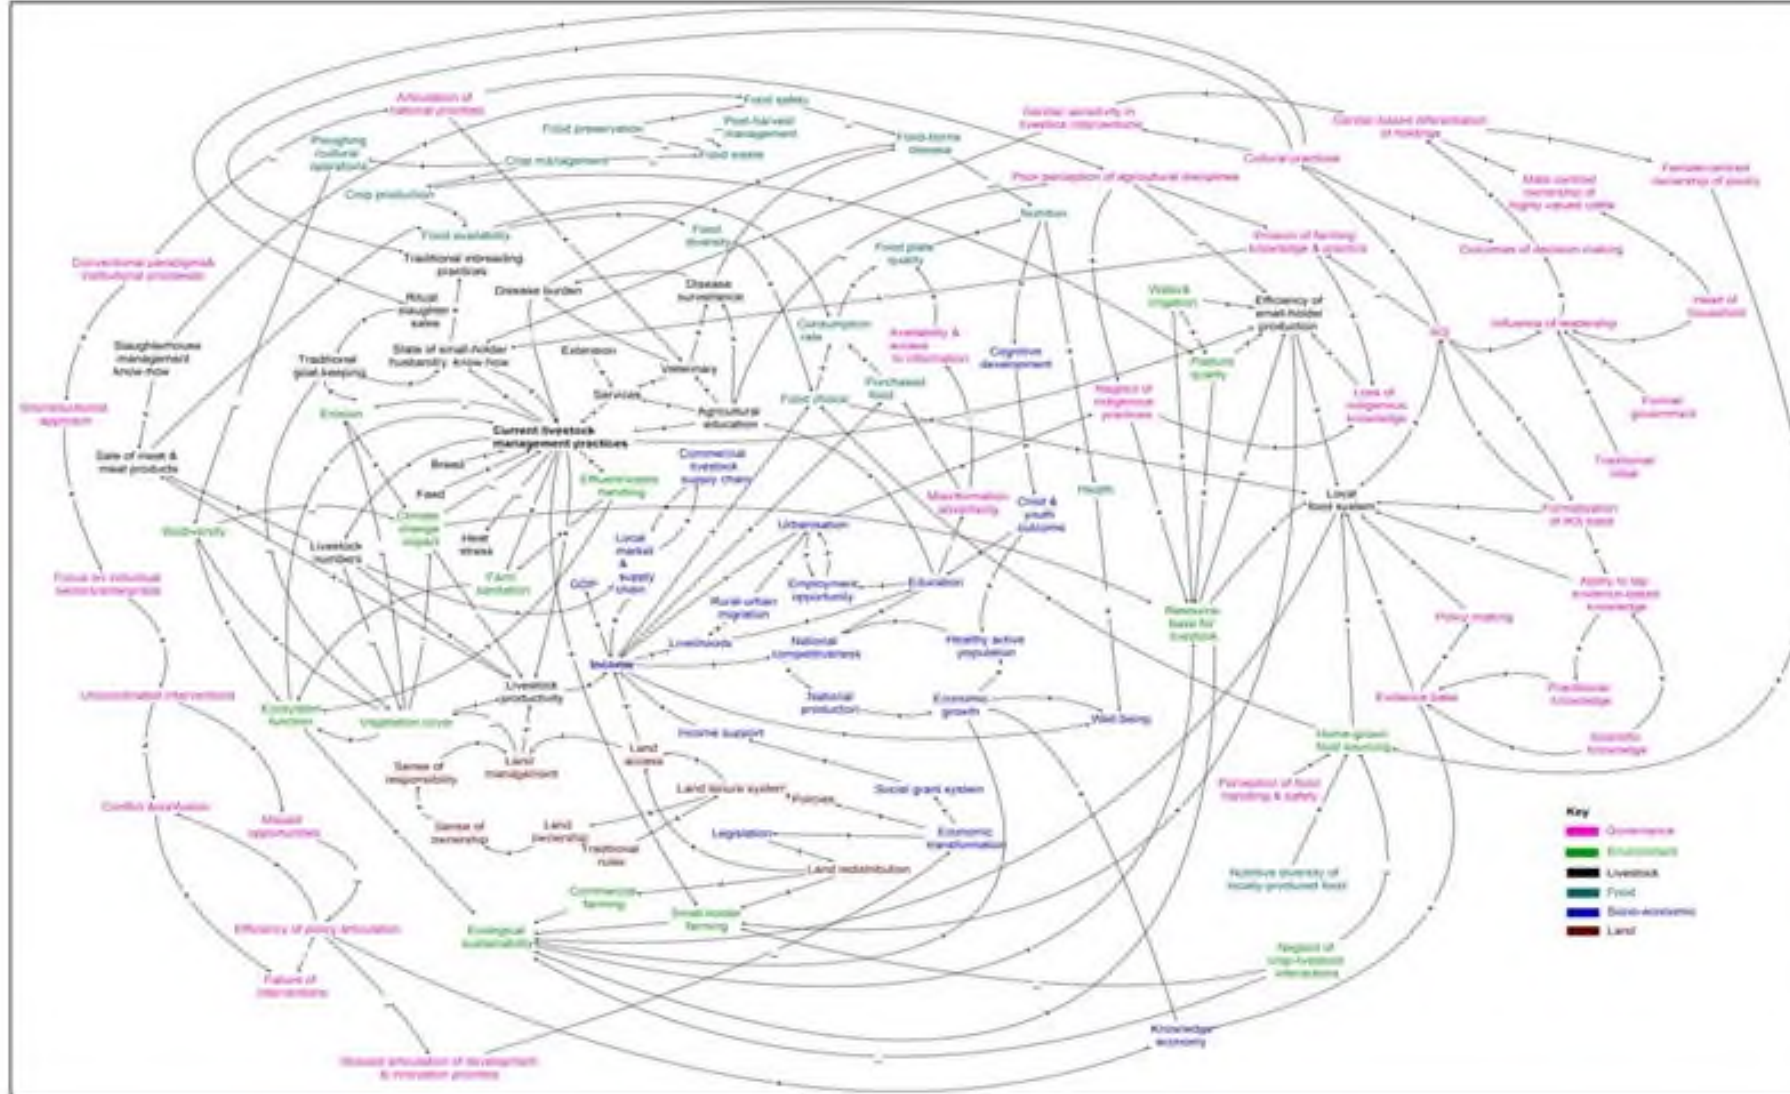

- A **causal loop diagram (CLD)** is a **visual tool** used in **systems thinking** to illustrate the **feedback loops** between different variables in a system. Each arrow in a CLD indicates how one variable influences another, highlighting whether the effect is **reinforcing** (moving in the same direction) or **balancing** (moving in the opposite direction).

# What is a Causal Loop Diagram?

# Livestock-derived food system in South Africa

<https://europepmc.org/article/MED/32879750>

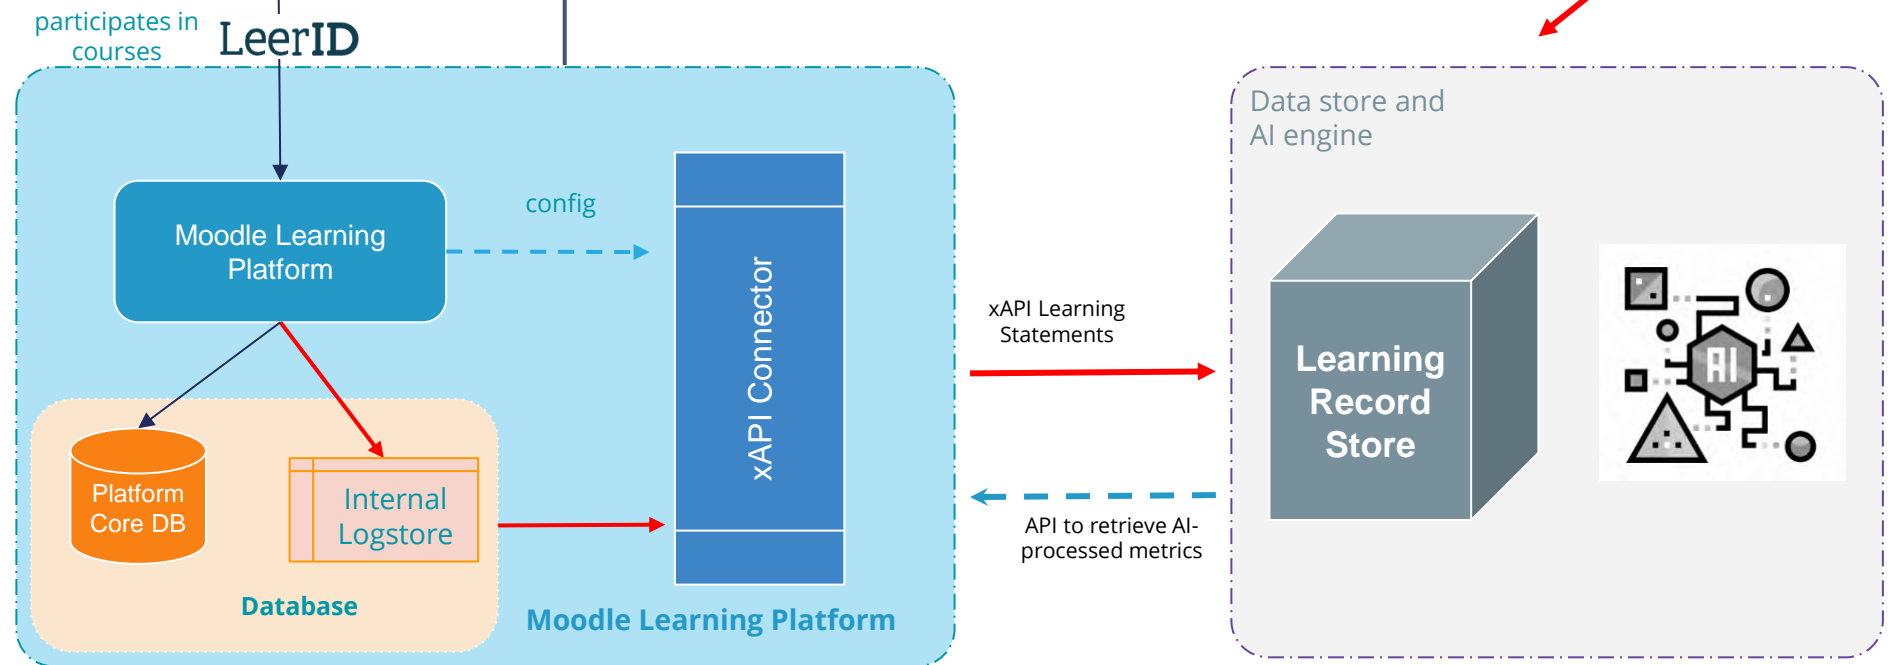

# Process Behind Their Creation

- **Observation & Data Gathering:** Collect qualitative or quantitative information about the system.
- **Team Brainstorm:** Involve multiple stakeholders (teachers, administrators, students, etc.) to capture different viewpoints.
- **Drafting the Diagram:** Sketch the variables and arrows on a whiteboard or paper; mark the polarity of each link.
- **Validation:** Discuss the draft with the team, ensuring it accurately represents real-world relationships.
- **Iteration:** Refine and simplify. Add or remove variables as new insights emerge.
- **Use in Decision-Making:** Identify loops that are critical to success or risk. Develop strategies to reinforce positive loops or break negative cycles.

# IMPLEMENTATION

# Process/Dynamics (1/2)

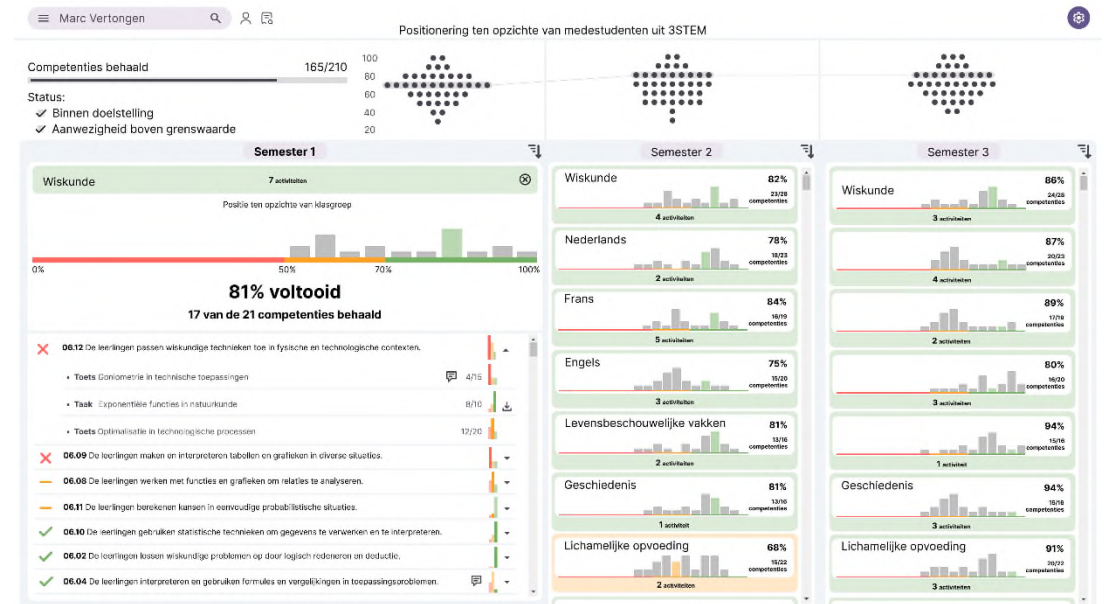

- Planning & Needs Assessment
  - Conducted CAF self-evaluation to identify data gaps and clarify objectives.
  - Engaged teachers, administrators, and external experts in workshops.

# Process/Dynamics (1/2)

- Defining Objectives & Mobilizing Resources
  - Developed interactive dashboards for competency tracking, engagement metrics, and bottlenecks/alerts.
  - Collaborated with GO! CVO Antwerpen, KU Leuven (Augment – Computer Sciences), and Eummena vzw for technical assistance.

# Process/Dynamics (1/2)

- Defining Objectives & Mobilizing Resources
  - Developed interactive dashboards for competency tracking, engagement metrics, and bottlenecks/alerts.
  - Collaborated with GO! CVO Antwerpen, KU Leuven (Augment – Computer Sciences), and Eummena vzw for technical assistance.
- Dashboard Development & CLD Integration
  - Built three Moodle-integrated dashboards connected to a Learning Record Store (LRS).
  - Used CLDs to understand systemic relationships (e.g., engagement → performance → motivation).

## Process/Dynamics (2/2)

- PHASE 1: PILOT TESTING & FEEDBACK (cycles)
  - Small-scale pilot -> Feedback via surveys /focus groups.
  - Refined dashboard design & teacher training.

- PHASE 2: FULL IMPLEMENTATION & TRAINING
  - Rolling out system school-wide (hands-on workshops)
  - Ensuring GDPR compliance & access policies

# Results/Outcome (1/2)

- Improved Teacher Adoption
  - It is assumed that over 80% of teachers will regularly consult the dashboards for performance monitoring.
  - Shift from final-grade focus to continuous, data-informed evaluations.
- Early Intervention & Student Support
  - 30% increase in proactive interventions (extra tutoring, personalized learning plans).
  - Alerts flag students at risk based on declining engagement or repeated low scores.
- Reduced Data Retrieval Time
  - Dashboards provide real-time insights, cutting data collection time by ~60%.
  - More time allocated to pedagogy and mentoring instead of manual data gathering

# Results/Outcome (2/2)

- Holistic Decision-Making
  - Integration of formative assessments, engagement metrics, and CLDs in deliberations.
  - More nuanced understanding of student progress beyond summative grades.
- Teacher-Created Digital Content
  - 15% rise in teacher-authored course materials on Moodle (two years)
  - Movement away from publisher-driven textbooks toward open-source and AI-supported resources.
- Future Outlook
  - Annual review cycle for continual dashboard improvements.
  - Plans to integrate with the Student Information System (SIS) for even richer data profiles.

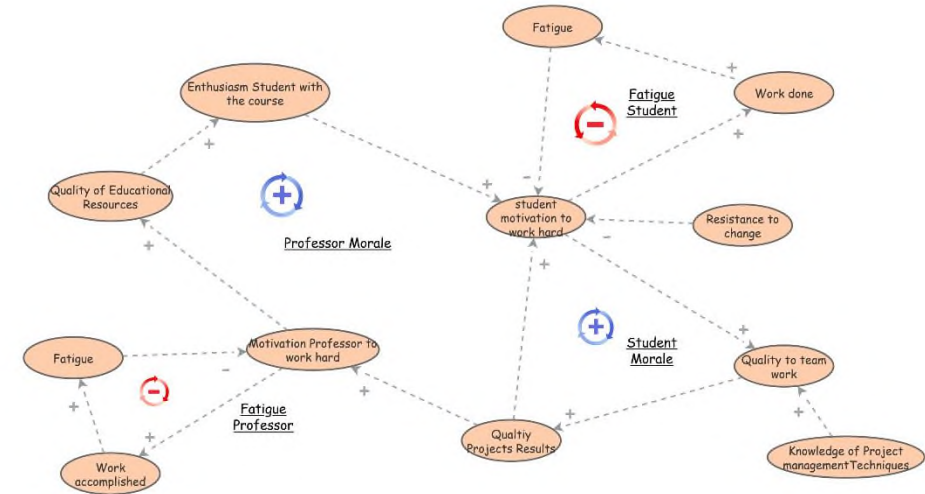

# Lessons Learned & Key Recommendations (1/2)

- Embrace CAF Self-Assessment
  - A structured review of existing practices (e.g., data use, teacher involvement) is crucial before implementing technological changes.
- Foster Stakeholder Engagement
  - Involve teachers, students, and external partners from the planning stage.
  - Encourage co-creation for greater buy-in and smoother adoption.
- Invest in Data Literacy & Ongoing Training
  - Transitioning to data-driven methods requires continuous professional development.
  - Clarify that analytics are aids, not absolute determinants of student performance.

# Lessons Learned & Key Recommendations (2/2)

- Adopt Systems Thinking
  - Causal Loop Diagrams reveal underlying feedback loops, guiding more holistic interventions (Complex Adaptive Systems).

- Champion Open-Source & Collaboration
  - Leverage platforms like Moodle for adaptability and cost-effectiveness.
  - Share solutions and learn from other schools/organizations pursuing data-driven strategies.

# Contact Details

- Project Manager/Contact Person:
  - Name : Marc Rabaey
  - Email : [directie@gito-overijse.be](mailto:directie@gito-overijse.be)
  - School : GITO Overijse, Belgium
- CAF Support
  - Name : Ingeborg Maes
  - Email : [ingeborg@insightful.be](mailto:ingeborg@insightful.be)
  - Company: Insightful, Belgium

Thank you!
