

KANN

Polish supplier biocidal preparations

Due to the epidemiological situation and numerous inquiries regarding disinfection agents, we want to interest you with our offer.

We offer products for personal protection and professional disinfection.

We have two product lines:

1. Personal Care
2. Professional

Biocidal product!

The effectiveness of the products is confirmed by obtaining an authorization for a biocidal product. Many products have appeared on the market, which do not guarantee full protection.

CHOOSE YOUR SAFETY CONSCIOUSLY!

Personal Care hand skin disinfection and care.

The Personal Care line includes products that are safe to use, intended for disinfecting and caring for the skin of the hands. The products included in this line have a biocidal product approval certificate, which confirms their effectiveness. Moreover, the products from this line are also registered as cosmetics, which means that despite their high effectiveness against bacteria and viruses, they are gentle on the skin of the hands.

Professional disinfection of surfaces, including surfaces that have contact with food.

The Professional line is designed to sterilize surfaces and spaces. In addition to standard alcohol-based products, this line includes innovative solutions based on silver nanocolloids with strong antimicrobial properties.

Professional

ANTIBACTERIAL AND ANTIVIRAL SURFACE DISINFECTION FLUID

- The preparation is used in the fight against viruses, fungi and pathogenic bacteria.
- Approved for contact with food.
- Especially recommended for use in laboratories, beauty salons, health care units and other places where frequent surface disinfection is required.
- Leaves a pleasant smell on the cleaned surfaces.

The active ingredient of the preparation is ethanol (700 g / kg of the preparation), which provides a broad spectrum of antibacterial activity. The product has aromatic additives that mask the smell of ethanol, due to which our preparation is not only effective, but also pleasant to use. The product is recommended for laboratories, health care facilities, beauty salons, tattoo parlors and other places requiring frequent and effective surface disinfection. The liquid is recommended for disinfecting disposable gloves. The product is approved for contact with food. Due to its drying properties, the liquid is not recommended for disinfecting hand skin. For hand skin disinfection, we recommend personal care products.

Application tips:

The preparation is ready for use. Apply an appropriate amount of the preparation on the surface and spread it. The fluid does not require rinsing.

Personal Care

HAND HYGIENE GEL WITH ANTIBACTERIAL AND ANTIVIRAL EFFECT

- Gel composition allows for trouble-free distribution of the preparation on the surface of the hands.
- The preparation is used in the fight against viruses, fungi and pathogenic bacteria.
- After the alcohol has evaporated, it leaves a pleasant smell on the hands.
- Protects hands against excessive drying.
- Works without the use of water.

HAND HYGIENE LIQUID WITH ANTIBACTERIAL AND ANTI-VIRUS EFFECT

- The preparation is used in the fight against viruses, fungi and pathogenic bacteria.
- After the alcohol evaporates, it leaves a pleasant scent of eucalyptus oil on the hands.
- Protects hands against excessive drying.
- Works without the use of water.

How to use:

Apply a small amount of the preparation on your hands. Spread it over the entire surface of your hand and spread until completely dry. It does not require rinsing.
