

FORMULARZ DLA OGŁOSZENIODAWCÓW

INSTITUTION: Sieć Badawcza Łukasiewicz – PORT Polski Ośrodek Rozwoju Technologii

CITY: Wrocław

STANOWISKO : Research and Technical Specialist in P4Health - Center of Excellence in Precise Phenotyping and Biodatabanking for Personalised Brain Health K/M (2 x part-time vac.)

DATE OF ANNOUNCEMENT: **31.07.2026**

DEADLINE FOR APPLICATIONS: **30.08.2026**

LINK TO THE WEBSITE: <https://port.lukasiewicz.gov.pl/>

The Łukasiewicz Research Network – PORT (Polish Centre for Technology Development) is a research institute within the Łukasiewicz Research Network. It focuses on the development of new technologies by conducting research for the needs of and in collaboration with industry. With our team of high-calibre specialists and state-of-the-art infrastructure, we are able to carry out the most advanced scientific research. Our Institute comprises three research centres – the Centre for Life Sciences & Biotechnology, the Centre for Materials Engineering and the Centre for Population Diagnostics – all of which have access to specialist laboratories. This combination enables us to carry out both scientific research and pilot studies for industry in a comprehensive manner.

We are currently seeking candidates for the position of:

Postdoctoral Fellow in Neurodegeneration in P4Health- Center of Excellence in Precise Phenotyping and BioDataBanking for Personalized Brain Health K/M

P4Health: Center of Excellence in Precise Phenotyping and BioDataBanking for Personalised Brain Health.

Project is carried out within the **MAB/IRA** programme of the Foundation for Polish Science.

The **P4Health Centre of Excellence** is an interdisciplinary initiative focused on advancing Predictive, Preventive, Personalized, and Participatory (P4) approaches in health and medicine. Within the IRAP framework, the project's scientific goal is to discover and validate novel therapeutic concepts aimed at counteracting symptoms of brain disorders associated with astrocyte pathology. The applied research programme is designed to deliver a detailed understanding of the mechanisms of astrocyte dysfunction and its impact on neuronal networks, building on the complementary expertise of a team with a strong publication record in reputable journals and proven experience in identifying nervous system pathomechanisms and developing prototype drug candidates. Project outcomes will be protected as intellectual property and will provide a foundation for translation through clinical studies and appropriate commercialisation pathways.

P4Health's key features:

- Interdisciplinary centre advancing P4 approaches in health and medicine
- Applied, mechanism-driven research focused on astrocyte dysfunction and its effects on neuronal networks
- Strong scientific track record demonstrated through high-quality publications and prior discoveries in nervous system pathomechanisms
- Translation-oriented strategy, from concept validation to clinical studies and commercialisation

- Systematic protection and management of intellectual property to support downstream implementation

Position description:

P4Health CoE is seeking an ambitious and motivated Research and Technical Specialists. A position is available in the Laboratory of Astrocytes Biology, led by Dr. Michał Ślęzak. The group focuses on neuro-glia interactions related to neuropsychiatric phenotypes. Our interdisciplinary research aims to identify cell-autonomous pathways for better understanding of trait-specific neuropathologies and to propose novel therapeutical targets.

The group employs brain region- and/or cell-specific genetic and/or pharmacological manipulations with advanced readouts of astrocyte functions and its behaviorally-relevant modulation. We are looking for an enthusiastic researcher to broaden our think-tank with his expertise in monitoring physiological processes (e.g. automated tracking of behavior, network activity) in biological models of disease. The ideal candidate has a strong motivation to perform translational research in neuroscience, presents deep background knowledge in data analysis, and is capable of independent and creative thinking.

Working closely with experimental researchers, you will generate integrative insights into disease biology to identify candidate pathways and therapeutic targets and contribute to advancing our understanding of the cellular processes underlying discrete symptoms of psychiatric disorders.

We encourage applications from candidates of all nationalities, genders and backgrounds.

Key responsibilities include:

- Evaluating, adopting and applying emerging bioinformatics and AI-based tools, technologies and best practices to maintain cutting-edge analytical capabilities
- Generating computational insights into disease biology and pathological mechanisms, supporting hypotheses generation and experimental research
- Reporting to the group leader
- Contribute to publications and presentations, highlighting the scientific impact of bioinformatics efforts
- Maintaining high-quality laboratory records
- Communicating and collaborating within the team
- Contributing ideas to address project-related questions
- Actively contributing to a collaborative, interdisciplinary research environment

Profile of candidates/requirements:

- MSc in neuroscience, biological sciences, biomedical sciences, bioinformatics, biostatistics or informatics
- Minimum 1 year of experience working in the bioinformatics field and using computational approaches in biomedical research
- Experience in the statistical and functional analyses of biological multi-omics data
- Programming skills in a scientific programming language
- Understanding and genuine interest in AI and GenAI concepts
- Ability to work independently and interacting within a group
- Commitment, creativity and motivation to take on challenges
- Very good work organization skills
- Excellent communication skills in English

We encourage applications from candidates of all nationalities, genders and backgrounds.

Required documents:

- CV including list of publications
- Cover letter motivation to join P4Health
- Copy of diplomas
- Contact details for two referees
- Contact information, including e-mail address and phone number
- The candidates may include additional information or copies of documents/certificates in support of the application

Remuneration: 8000-11000 PLN gross

We offer:

- Part-time (0,5), 2 vacancies
- Flexible working arrangements, including the possibility of hybrid work, depending on the nature of the tasks and project requirements
- Integration into the newly founded P4Health Center of Excellence, with strong institutional support
- Active mentorship
- Participation in international conferences and workshops
- Opportunity to collaborate with an experienced scientific team, with structured support for scientific and career development.
- Possibility to contribute to high-quality scientific publications and to engage in activities supporting the commercialization of research outcomes.
- Co-financing of private medical care.
- Co-financing of a sports and wellness card.
- Option to enrol in group life insurance.
- Co-financing through the Social Benefits Fund (including holiday and Christmas benefits).
- Work in a modern, green science campus environment. Free on-site parking.
