

Accurate Diagnostics **for** Busy Healthcare

**UNMATCHED
SOLUTIONS
FOR QUALITY
CONTROL**

Leading the Future of Medical Confidence

Who we are

Pro-Project provides life-changing solutions that improve quality in the medical device industry. Too often, healthcare settles for devices that are “good enough”, but our team at Pro-Project sets higher standards than the baseline.

We develop hardware for benchmark testing, in addition to our exclusive comprehensive software. All together, it gives companies more control over the quality of their diagnostic devices. Our solutions combine the power of automation with the convenience of the cloud. This approach helps streamline the quality control process and bring patient care to a higher level while reducing costs.

We provide solutions for quality control in dentistry, radiography, fluoroscopy, mammography, CT, MRI, nuclear medicine, ultrasound, radiotherapy and NDT.

Vision

Accurate Diagnostics for Busy Healthcare

Mission

Pro-Project delivers unmatched solutions for quality control.

A Partner You Can Trust

Founded in 1991, Pro-Project has a long-standing reputation in the medical device community. We've dedicated many years of research, development and industry knowledge to the products we create, and we don't take our responsibility lightly.

To date, we are the only company in our industry to boast a wide range of certified quality management systems: ISO 9001:2015, ISO 13485:2012, ISO 14001:2015, OHSAS 18001:2007 and ISO / IEC 27001:2013.

Our goal is not just to achieve compliance—we're setting new standards for what quality medical devices should be.

Explore Pro-Project's solutions for yourself and discover how you can be part of our journey as we change what Quality Testing can be, one device at a time.

In Medicine Accuracy Is Everything

Scan the benchmark test object (phantom) as you would scan a patient. We provide combined “many-in-one”, easy to use, universal tools for each modality, designed in a way that makes it easy to position them and perform most, if not all, tests at a single exposure / scan.

Send Images from the device directly to the Pro-Control.online.

We are using DICOM protocol, so the integration with healthcare equipment is very easy. Encrypted communication and the fact that no patient data is transmitted makes the process safe and easy.

Images are automatically evaluated and results are saved on your account together with previous tests. An e-mail will inform you if test results are positive and the device is producing reliable images. If everything goes well, you will not even have to log in to the PCO. Detailed reports, statistics and diagrams provide invaluable information on device performance over time.

Easy, Automatic, Essential

Medicine's Quality Control Specialists

BEST QUALITY ON THE MARKET

We are **the only** ones to hold **so many certified** Quality Management Systems.

BEST TECHNOLOGY ON THE MARKET

We are **the only** company to simultaneously manufacture:

- wide range of resolution test patterns to at least **25 LP/mm**
- pinhole and slit cameras with holes up to **0.01 mm**
- mammography contrast details gold discs with **0.1 nm** accuracy

BEST INNOVATION ON THE MARKET

We are the only ones to offer comprehensive **software platform** that combines all key elements of quality control – diagnostic devices, hospital IT systems, phantoms and meters - opening up unheard-of possibilities and making the whole process **simple and automatic**.

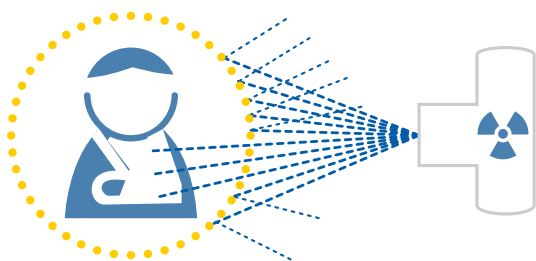

BEST OFFER ON THE MARKET

We are the only ones to manufacture **IN HOUSE** so many phantoms for medical and industrial applications, and at the same time develop supporting software for them, allowing clients to reap the benefits from this **SYNERGY**.

UNMATCHED[®] SOLUTIONS FOR QUALITY CONTROL

MEANS

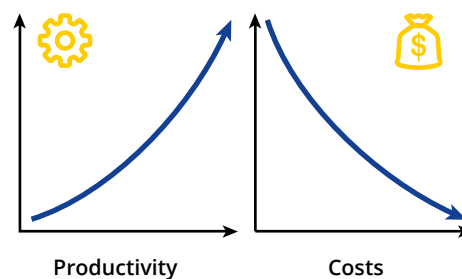

2. Increased patient safety (the ALARA principle)

Because all devices for image diagnostics are under control, there is no risk of excessive radiation or wrong diagnosis.

4. ease of implementation and operation

One platform using telemedicine (the DICOM protocol) to control the quality of any number of diagnostic imaging devices.

1. Increased productivity and cost reduction

We do not waste working time of qualified personnel for time-consuming image examinations or test results evaluation since they are automatized by the Pro-Control.online software platform.

3. Increased trust in proper operation of diagnostic devices

Objective tests show whether a device works properly or not, with any defects easily noticed, diagnosed and corrected.

6. unlimited access

Test results are accessible online from anywhere in the world, and from any device equipped with an internet browser.

8. Increased accessibility and no extra training

Thanks to a comprehensive online database of tutorial and training videos quality testing can be done by anybody who knows how to operate diagnostic devices.

10. unlimited warranty

As long as you have a valid subscription and your equipment is registered in PCO, it is under warranty.

5. standardization and synergy

One quality control system in the whole organization.

7. access to an unprecedented amount of information

The platform can combine an unlimited number of users from one organization; test results collected by each of them (via Pro-Control. online) are gathered in one place, providing easy and fast access to a huge amount of information from thousands of apparatus.

9. unlimited usage potential

The platform created and developed by us offers unmatched development and adaptation potential to suit individual needs of each and every user.

Simple, Efficient Quality Control

Pro-Dent ALL BASIC kit

This kit is a versatile set of phantoms and software for carrying out constancy and acceptance tests of Intra-oral, OPG, CBCT, DVT and other 3D imaging devices. Thanks to the Pro-Control.online subscription, all tests can be quickly and effortlessly automatically analysed online and with the desktop app.

Pro-RF BASIC kit

This kit is a versatile set of phantoms and software for carrying out constancy tests of radiography and fluoroscopy units. Thanks to the Pro-Control.online subscription, all tests can be quickly and effortlessly automatically analysed online and with the desktop app.

Pro-DigiMAM BASIC kit

This kit is a versatile set of phantoms and software for carrying out constancy and acceptance tests of mammography units. Thanks to the Pro-Control.online subscription, all tests can be quickly and effortlessly automatically analysed online and with the desktop app.

Pro-CT BASIC kit

This kit is a versatile set of phantoms and software for carrying out constancy tests of computed tomography units. Thanks to the Pro-Control.online subscription, all tests can be quickly and effortlessly automatically analysed online and with the desktop app.

Pro-MRI BASIC kit

This kit is a versatile set of phantoms and software for carrying out constancy and acceptance tests of magnetic resonance units. Thanks to the Pro-Control.online subscription, all tests can be quickly and effortlessly automatically analysed online and with the desktop app.
