

Corrigendum and Addendum

to Polish National Forestry Accounting Plan

Correction of table numbering in English translation

From page 20 onwards “+2” should be added to all table captions in the English courtesy translation. For instance, table “conversion factors” on page 20 is table 4 in the Polish version and table 2 in the English translation.

Correction of caption for table 11 in the English translation (table 13 of the Polish version)

The correct caption of this table is “Area and volume-based table of age classes as of 1 January 2010 according to the strata of forests (based on WISL data from the period from 2006 to 2010)” The title is correct in the Polish version of the NFAP.

Clarification for the use of GHG inventory

The GHGI submitted 23rd of May 2019 serves as reference GHGI for laying down the Polish Forest Reference Level.

Correction of the area for managed forest land in the English translation

The area of reporting year 2009 of the GHGI submission in 2019 (8,664 kha) was used in calculations for the FRL. This area is correctly stated in section 2.3.3 in the Polish version.

Correction of Table 24 in Polish NFAP

Table 24 (p. 52 of revised version of the NFAP), which incorporates C stock changes as estimated by model for each C pool between 2010 and 2025, contains an editorial error regarding to the sum of net emissions reported for living biomass pool, instead of sum of net emissions reported for living biomass pool only. This issue applies to the second row (living biomass) in Table 24 and was an effect of the modelling of carbon stock changes in the pools for category 4.A.1 Forest land remaining in forest land.

The values included in the current version of the revised version of NFAP for the living biomass row of Table 24 p. 52 are in fact reflecting the modelling effect of total ecosystem changes (without consideration of natural disturbances effects and soil organic carbon changes as well as carbon substitution effect in harvested wood products).

Since the values reflecting the net emission modelling effect for the living biomass pool are provided incorrectly, the data therein should be replaced with the data provided in the table below. It is important to note that the editorial error and the subsequent corrected table to address this issue do not have any implication in terms of calculations of forest reference level value (as reported in the revised version of NFAP).
