About KRUS

- The Agricultural Social Insurance Fund (**KRUS Kasa Rolniczego Ubezpieczenia Społecznego**) is an institution established to realize tasks connected with full servicing of farmers' social insurance. The purpose of establishing KRUS was to create in Poland an independent, specialized organization which, as a real manager of farmers' social insurance, could take over and assure efficient realization of tasks connected with servicing the insurance, which had been introduced earlier, as well as to assume new tasks which by then had not been realized by any insurance institution in the country.
- KRUS is managed by the President appointed by the Prime Minister on application of the Minister of Agriculture and Rural Development. After changes in Law (J.L. of 2006 No 75, item 519) the KRUS' system, monitored from 1. May 2004 by the Minister of Social Policy, in 19. May 2006 has returned to the Ministry of Agriculture).

IBM Cloud

Problem description

Obligation to launch an educational campaign (External Portal - available to everyone)

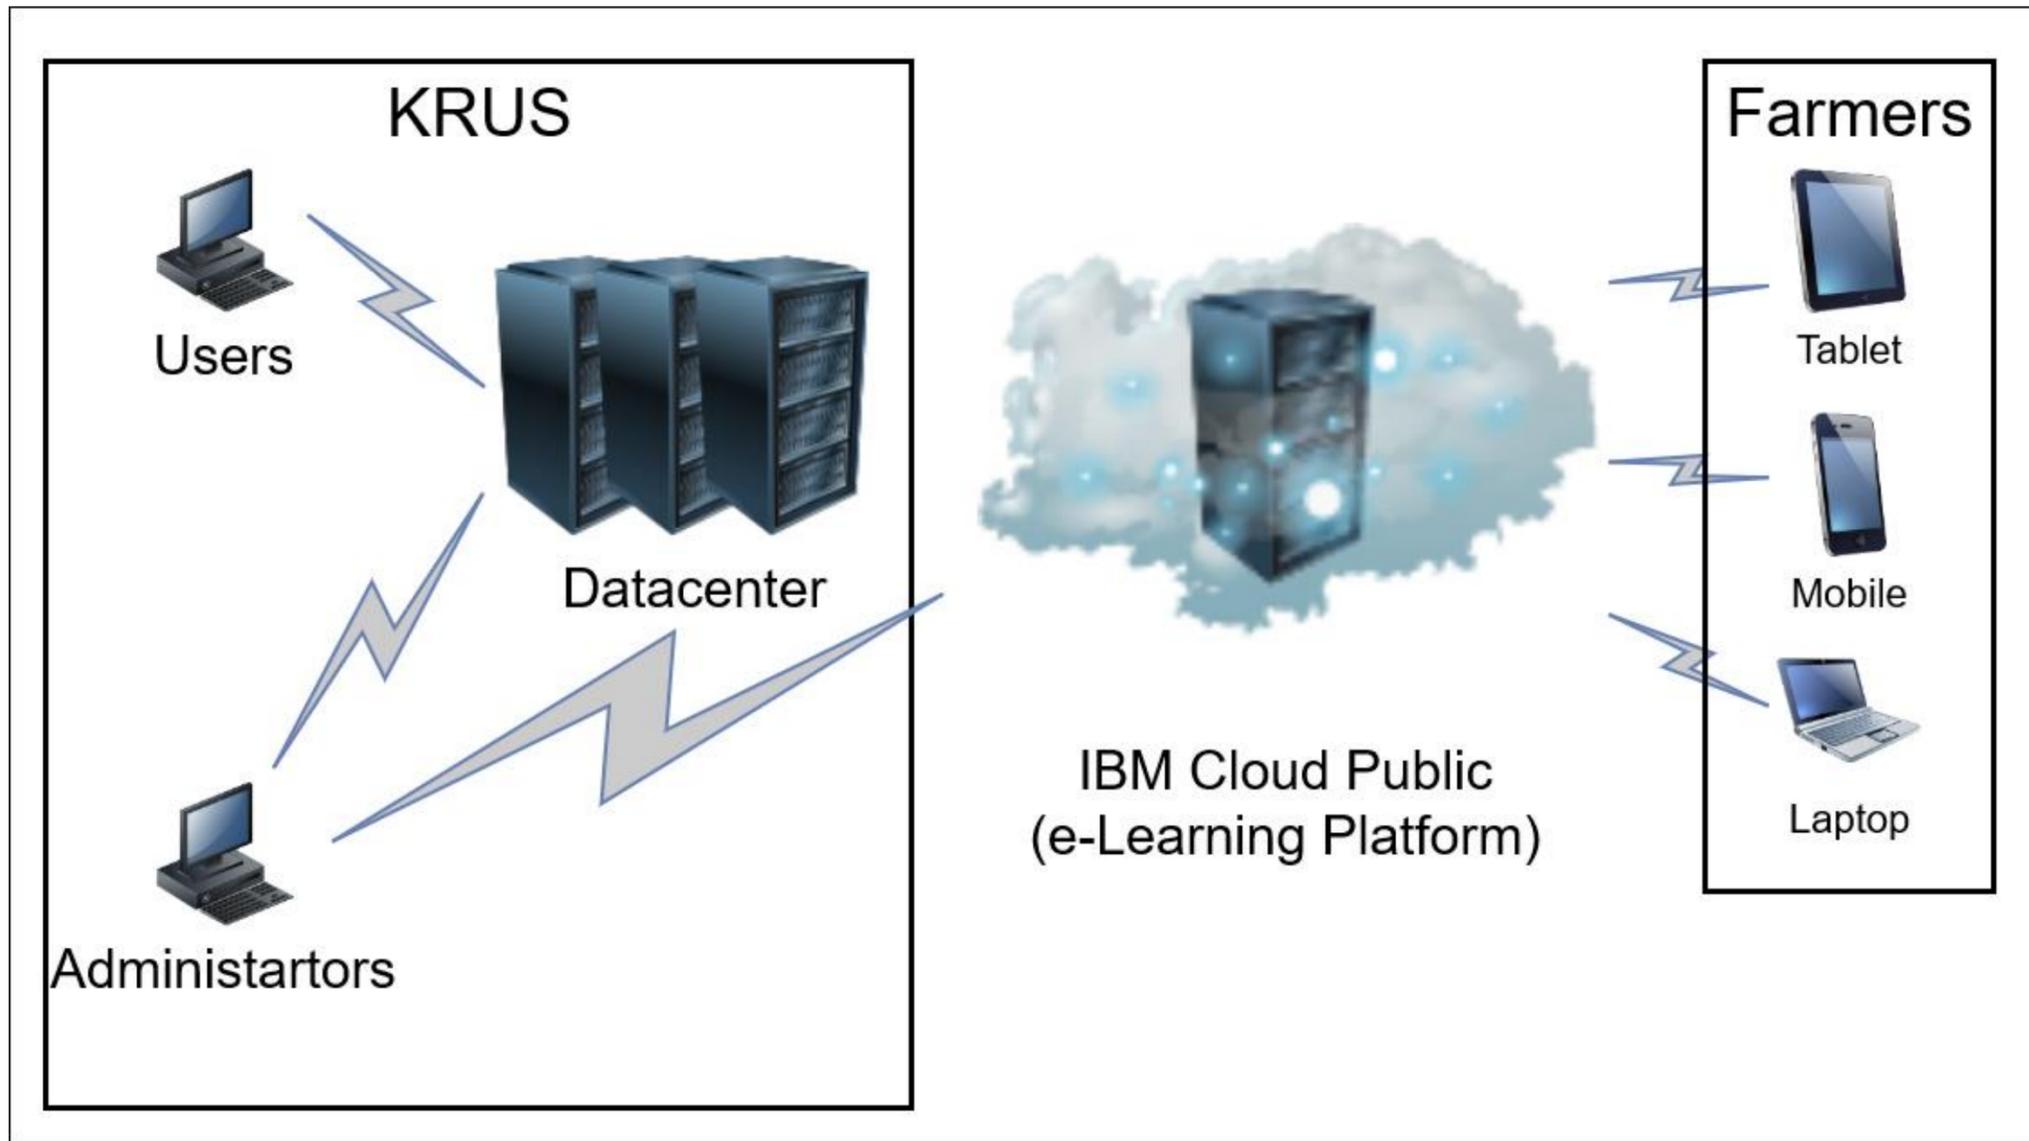

Fear of hacker attacks through the External Portal

Lack of dedicated environment separated from production systems

High cost of purchasing and maintaining dedicated infrastructure

IBM Cloud

Implemented Solution

Key Client Benefit

- Greater safety for farmers' children
- Running educational campaign in the required dates
- The best security option. No possibility of a hacking attack from an external portals to internal KRUS systems.
- The low cost of running an external portals
- Easy maintenance of the external portal
