Online registration of Cash registers in Poland

The Ministry of Finance has prepared an IT system enabling taxpayers to register their cash register via the Internet, without the need to fill in any forms and send them to the tax office.

Why does it matter?

The implemented system enables, among others:

Collecting sales data sent by cash registers to the Central Repository of Cash Registers (CRK).

Change of the schedule for the cash register i.e. the frequency of data transmission by the cash register to CRK.

Enable / disable printing on the receipt of a QR code.

Preview of daily reports and receipts issued by the cash register.

Performing analytical work on sales data from cash registers based on dedicated reports generated from the system.
