Note:

1. Data behind "±" are uncertainty; Data in () is for reference only. Date with * is in percent.

The certified value is the mean of analytical results of no less than 6 independent laboratories.

2. Standard uncertainty U is got by

$$U = t_{0.05(n-1)} \cdot \sqrt{u_a^2 + u_b^2} = t_{0.05(n-1)} \cdot \sqrt{(s/\sqrt{n})^2 + [R/(2 \cdot \sqrt{3m})]^2}$$

U_a , U_b is type A and type B standard uncertainty respectively, t is t value of t distribution from 95% confidence interval and degree of freedom n-1; S is standard deviation; n is number of data; R is the max difference of the mean of analytical method; m is number of analytical methods for statistic ($n \geq 2$). If there is only one kind of method, $U = 3 s / \sqrt{n}$ is used to estimate of uncertainty.

3. The sample is packed in bottle with size less 80 meshes. The package size for ZC73034 is 12g, others are 35g.

The standard should be dried at 80°C (60°C for easy volatilizable elements) for 4 hours before analysis.

The minimum weight for analysis is 0.2g.

4. The sample should be tight sealed after each use and stored in drier at dark and cool place.

The samples NCS ZC73034 and NCS ZC73035 should be stored at temperature lower than -10 °C, others lower 25 °C.

If the sample was find moldy, it should be stop to use.

5. The certification will expire in Dec.2024, although we reserve the right to make change as issue revisions.
